

Americans Booking Reservations To Moon, Mars And Jupiter

NEW YORK.—The space ship time-table says: "To Moon—9½ hours. To Mars—75 days. To Jupiter—458 days." Scores of thousands of Americans have signed up for reservations to go out of this world. The expected date—maybe 1975, maybe later. The space travel bureau of the Department of the Interior, the Museum of Natural History, will take your reservation.

In other started as a job, to publicize a planetarium. But the museum's imagination but realistic—seeing the trip to the Moon, Mars, Venus, Saturn and Jupiter. Space is the next world for man to explore.

In the show a rocket takes off with a whirling roar and disappears into the heavens. Suddenly, you're in the room for close-up looks at the planets. The close-ups are more of the

model based on paintings by Chagall, Matisse and other famous artists. These neighbors may look like you. They look like the colors of the moon, the red surface of cast-iron mud, the blue of the sea, the blue of the sky.

The idea of reservations to be based on the first come, first served basis. The first come, first served basis. The first come, first served basis.

A new story brought a flood of letters to associate curator Robert R. Coles. Most play along with the show, but some are serious about waiting to go some day.

A New York woman wrote for a ticket to the moon in 1975. It will be 34 years old then.

A New York woman said she would ask *Ladies of London* for a \$100,000 insurance policy to cover the return trip from Venus.

A Manhattan poet asked and he'd like to live on Mars, between the Moon and Mars. That way he could continue to other planets, selling his line of buildings material for new planetary houses.

Let Them Match When You Can

Color, stillability appear in an industrial paint can help reduce accidents and make work—a new, safe, stimulating innovation in home-decorating and the entire accident-prevention programme. One company found that after comparing the color carefully planned paint job in their plants, accidents were reduced 12 per cent. Another company found that in months after a repainting job had been done in their plant, accidents had dropped 10 per cent. The company is now able to do in abundance and is now in the market.

A properly planned paint job can light up work areas and working surfaces, and danger areas, exposed edges of platforms, protrusions of doorways, low beams, pipes, obstructions, etc. It can also make a hazardous area look like a safe area, and vice versa. It can identify location of equipment, emergency exits, traffic signs, etc. When you paint, paint with a purpose. Industrial Health Bulletin of the following suggestions for color in industry:

1. In painting machines, color should not be applied to machine surfaces. Effective color contrast may be obtained by providing a contrasting color for the hand tool or object being used.

2. The color of the ceiling, walls and doors should adequately reflect the light. The color of the ceiling should be light, and the color of the walls and doors should be dark.

3. The color of the floor should be light, and the color of the walls and doors should be dark.

4. The color of the floor should be light, and the color of the walls and doors should be dark.

5. The color of the floor should be light, and the color of the walls and doors should be dark.

6. The color of the floor should be light, and the color of the walls and doors should be dark.

7. The color of the floor should be light, and the color of the walls and doors should be dark.

8. The color of the floor should be light, and the color of the walls and doors should be dark.

9. The color of the floor should be light, and the color of the walls and doors should be dark.

10. The color of the floor should be light, and the color of the walls and doors should be dark.

11. The color of the floor should be light, and the color of the walls and doors should be dark.

12. The color of the floor should be light, and the color of the walls and doors should be dark.

13. The color of the floor should be light, and the color of the walls and doors should be dark.

14. The color of the floor should be light, and the color of the walls and doors should be dark.

15. The color of the floor should be light, and the color of the walls and doors should be dark.

16. The color of the floor should be light, and the color of the walls and doors should be dark.

17. The color of the floor should be light, and the color of the walls and doors should be dark.

18. The color of the floor should be light, and the color of the walls and doors should be dark.

19. The color of the floor should be light, and the color of the walls and doors should be dark.

20. The color of the floor should be light, and the color of the walls and doors should be dark.

Colour Adds Safety

Color, stillability appear in an industrial paint can help reduce accidents and make work—a new, safe, stimulating innovation in home-decorating and the entire accident-prevention programme. One company found that after comparing the color carefully planned paint job in their plants, accidents were reduced 12 per cent. Animals Master Art Of Curing Hay For Winter

(By G. Cameron Shindler in Green Sun-Times)

When I hear it said or read somewhere that animals can cure hay, I like to think of the little pigs or chickens that are used in the curing process. The curing process is a simple one, and it is a process that has been used for centuries.

Plastic Valves For Bad Hearts May Be Perfected In Two Years

ATLANTIC CITY, N.J.—Plastic valves for bad hearts were described by four Albany, N.Y., plastic surgeons.

Several dogs are being with the artificial valves in their hearts now. The valves are made of plastic and are being used in dogs.

Within two years it may be possible to put the plastic valves into human hearts, substituting them for the natural valves.
